# 1 Introduction

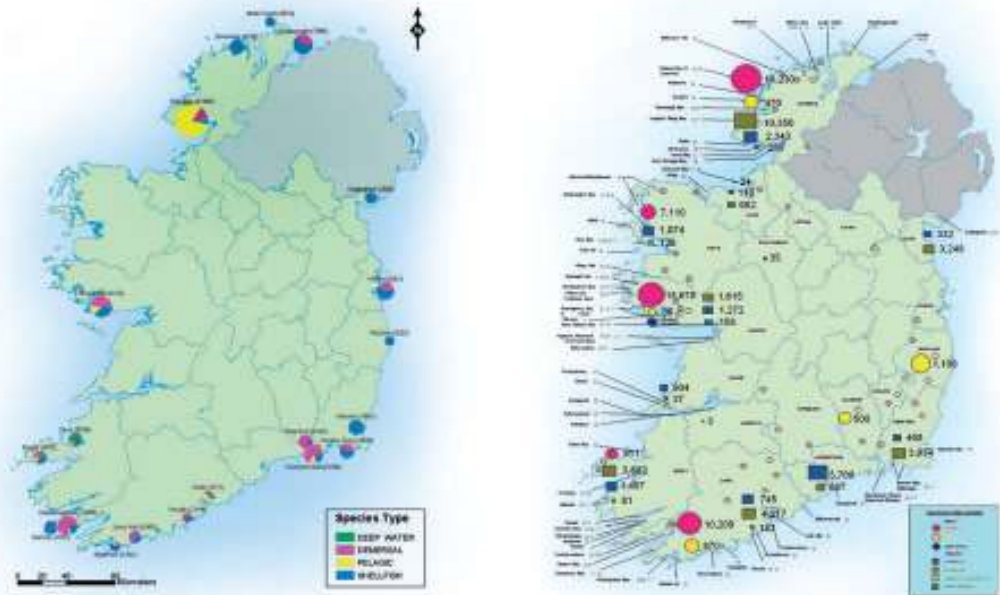

Priority AXIS 4 of the European Fisheries Fund (EFF) represents a new departure for structural aid in the fisheries sector. Unlike previous programmes, AXIS 4 focuses on the sustainable development of fisheries areas. This area-based approach was introduced into the EFF for the first time in the period 2007-2013 and reflects the complex and rapidly-changing forces affecting fisheries areas and communities.<sup>1</sup>

The purpose of this report is to assist in policy formulation for Irish fishing communities with respect to (i) local development studies for each of the six major Fishery Harbour Centres and (ii) local area plans under Priority Axis 4 of the EFF. To this end, the report presents a set of background statistics which describe the social and economic characteristics of each area as well as providing additional data specific to the fishing industry. This report centres on the Dunmore East Harbour Area and the South Eastern FLAG Region.

# 2 Background

Fish and shellfish are landed at the six major Fishery Harbour Centres (Killybegs, Castletownbere, Howth, Rossaveal, Dunmore East, and Dingle), at forty secondary ports and a further eighty piers and landing places where fish landings are recorded. Although fishing is of great importance to the local communities that make up the Irish coastal regions, there are few statistics which show the contribution made by fishing and aquaculture to sustainable local development, how this contribution has changed over time, and what the current constraints and opportunities are for the industry and the people involved in it. The purpose of this profile is to fill this knowledge gap using existing data sources.

### 3 Available Data Sources

In outlining the key data sources, we draw closely on Hynes and Farrelly (2012)<sup>3</sup> who have recently undertaken a review of the issues involved in data collection on coastal regions in Ireland. In particular, we follow their three-fold classification of areas: shoreline EDs, coastal counties and EU coast (NUTS3). Whilst, from an EU perspective, coastal regions are defined at the NUTS3 level, Hynes and Farrelly argue that from an Irish policy perspective, the definitions at county and particularly ED level are more important than the European definition of ‘coastal’ at NUTS3 level, which comprises about 95 per cent of the country’s population. As the report serves the dual function of providing socio-economic data for each of the FLAG regions and the major Fishery Harbour Areas which are located within each of the individual regions, this report presents data at three spatial levels: (i) coastal counties, (ii) coastal EDs and (iii) the respective Harbour Areas. In each case, comparisons are made to the combined FLAG regions and Ireland as a whole.

The data presented are drawn from Small Area Population Statistics (SAPS) at the level of Electoral Divisions (EDs). Since publication of the 2011 Census of Population, it is possible to analyse data at the level of Small Areas (SA), the new census geography. However, SAs mainly provide a subdivision of urban EDs, offering few additional insights into the predominantly rural areas of the coastal region. It would also restrict the analysis to the 2006 and 2011 censuses. Undertaking the analysis at the ED level, by contrast, allows us to draw on consistent datasets covering the past five census waves, which we believe to be of major significance when analysing the developmental trajectories of coastal communities over a 20-year period.

**Table 3.1: Availability of core socio-economic data at various levels of coastal definition**

\* This Department of Agriculture data required prior geocoding for the purposes of this study

Table 3.1 summarises the data used in this report. Unlike Hynes and Farrelly, we do not consider data from the Agricultural Census, or GDP which cannot be calculated at the level of counties, never mind electoral divisions.

<sup>3</sup> Hynes, S. and Farrelly, N. (2012) “Defining standard statistical coastal regions for Ireland” in *Marine Policy*, Vol 36, pp. 393-404.

A major advance with respect to the considerations put forward by Hynes and Farrelly is the longitudinal nature of the data provided in this report. At least for the Census-based information, it is possible to provide consistent data spanning five census waves. This allows us to study trends in the contribution that the fishing industry has made to coastal regions in general, and to assess whether these trends differ with respect to the individual harbour centres and FLAG regions. These are important considerations when gauging the sustainability of each area and identifying their respective strengths and weaknesses. Finally, we will compare the experience of each area during the 15 years of economic growth (1991 to 2006) and over the latest census period, 2006 to 2011, following the onset of recession in 2007.

## 4 Defining Coastal Areas

We will present data using three geographical definitions: (i) the coastal counties, (ii) the strip of shoreline EDs and (iii) the narrowly-defined major harbour areas, comprising small clusters of EDs. As we noted above, the EU defines coastal regions at NUTS 3 level. Seven out of eight NUTS 3 regions have a shoreline and the Irish Coastal Region, thus defined, would include 94.4 per cent of Ireland’s population. When defining coastal regions in terms of counties with a shore line, Coastal Counties include 22 out of 34 local authority areas, or about three quarters of the Irish population<sup>4</sup>. Defining coastal regions in terms of a strip of shoreline EDs leads to the identification of 513 out of 3,409 EDs and about one sixth of the population, which would appear to be more satisfactory. We have also made some minor adjustments to the definitions used by Hynes and Farrelly. For example, we exclude coastal EDs which are further upstream and belong to any of the five city areas and exclude South County Dublin, which does not have any shoreline.

Figure 2: Definition of Coastal EDs and Counties

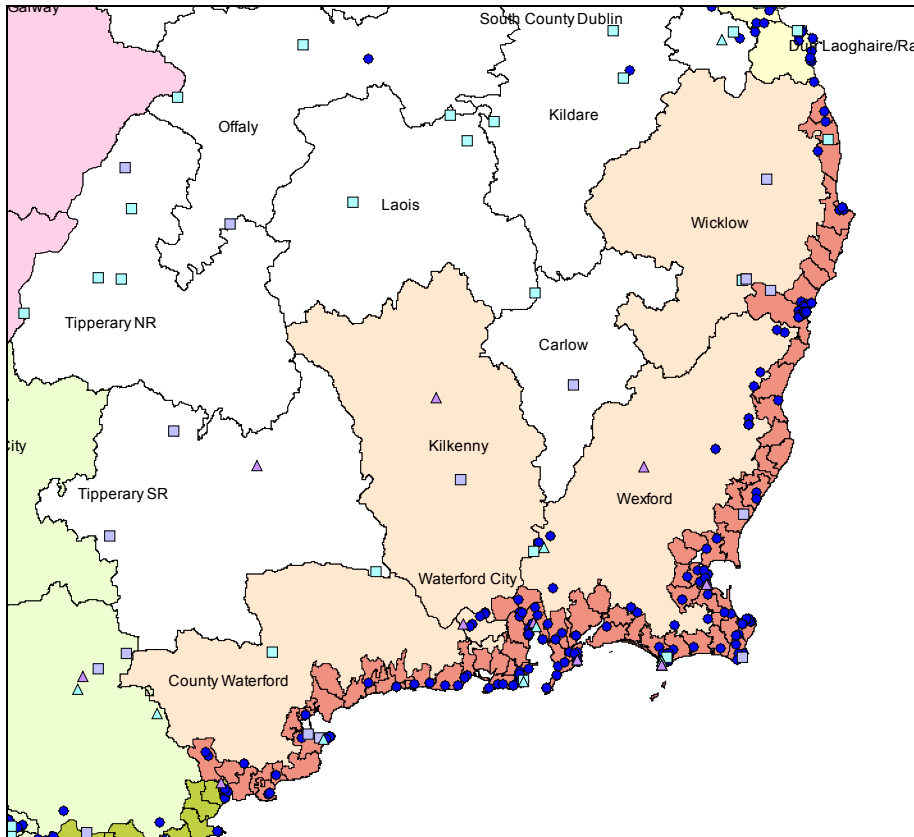

<sup>4</sup> Note: whilst using the term ‘counties’, we actually base our calculations on NUTS 4 regions, which are defined as Local Authorities. As the wider Dublin area comprises four such areas, South County Dublin does not have a shoreline and is excluded from the definition of coastal counties.

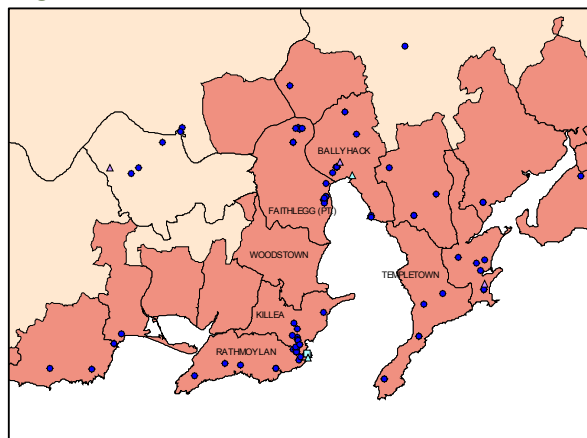

Figure 3 shows the coastal EDs and counties for the FLAG South East Region. The Region comprises four counties – County Waterford, Kilkenny, Wexford and Wicklow – and 80 coastal EDs (27 in County Waterford, 1 in Kilkenny, 39 in Wexford and 13 in Wicklow).

The Dunmore East Harbour Area (Figure 4) is considered according to two alternative definitions: a narrow definition (named Dunmore East A) comprises three EDs: Killea (25075), Rathmoylan (25081) and Woodstown (25084). A wider definition (named Dunmore East) adds another three EDs to those detailed before: Faithlegg (pt) (25072), Ballyhack (14067) and Templetown (14088).

**Figure 3: Coastal EDs and Counties of the South East Region**

**Figure 4: The Dunmore East Harbour Area**

## 5 Key Socio-economic Indicators

In this section we present a series of socio-economic indicators for the FLAG South East Region and the Dunmore East Harbour Area. The data are based on five successive population censuses, spanning the period from 1991 to 2011. In addition, we report scores for the Pobal HP Deprivation Index, which provide an overall measure of relative affluence/deprivation based on ED-level census indicators. A more detailed description of the Pobal HP Deprivation Index, as well as a guide to the interpretation of the scores, is provided in the appendix to this report.

An evaluation of the experience of the coastal regions relative to the country as a whole depends upon how these regions are defined. As the definition at NUTS 3 level is not particularly meaningful in the Irish context, we provide separate evaluations of developments over the past 20 years for counties and EDs, as well as looking at the more narrowly-defined harbour area of Dunmore East (distinguishing between two varying harbour area definitions).

### 5.1 Population

Ireland experienced sustained population growth between 1991 and 2011, leading to an overall increase of 30.1 per cent. Following a slight decline (just 0.4%) between 1986 and 1991, the population grew by 2.8 per cent during the following inter-censal period and at just over eight per cent in each of the last three periods, including 2006-2011, which coincided with the onset of recession.

**Table 5.1 CO: Population – Coastal Counties**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	1,012,659	1,041,434	1,119,812	1,214,339	1,314,896	29.8%
South East	364,593	377,070	413,157	453,462	491,174	34.7%
South West	694,219	711,682	755,660	805,185	856,343	23.4%
West	271,282	282,860	312,354	342,620	367,849	35.6%
North West	190,770	192,402	201,445	213,683	227,829	19.4%
North	128,117	129,994	137,575	147,264	161,137	25.8%
<b>Coastal Counties</b>	<b>2,661,640</b>	<b>2,735,442</b>	<b>2,940,003</b>	<b>3,176,553</b>	<b>3,419,228</b>	<b>28.5%</b>
<b>Ireland</b>	<b>3,525,719</b>	<b>3,626,087</b>	<b>3,917,203</b>	<b>4,239,848</b>	<b>4,588,252</b>	<b>30.1%</b>

When we define coastal regions in terms of counties, population growth was marginally below that experienced nationally, leading to a decline of one percentage point in the share of population living in coastal regions, from 75.5 per cent in 1991 to 74.5 per cent in 2011 (Table 5.1 CO %). Growth was uneven across FLAG Regions, with the South East (34.7%) and West (35.6%) growing at an above-average rate, and the North West (19.4%) and South West (23.4%) at a much lower rate.

**Table 5.1 ED: Population – Coastal EDs**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	102,756	106,418	124,115	149,014	171,047	66.5%
South East	105,047	111,082	124,279	139,741	153,317	46.0%
South West	137,163	142,838	155,438	167,652	180,032	31.3%
West	70,609	71,983	77,084	82,602	88,401	25.2%
North West	59,063	60,635	64,855	67,420	71,675	21.4%
North	76,744	77,338	80,265	84,557	91,406	19.1%
<b>Coastal EDs</b>	<b>551,382</b>	<b>570,294</b>	<b>626,036</b>	<b>690,986</b>	<b>755,878</b>	<b>37.1%</b>
<b>Ireland</b>	<b>3,525,719</b>	<b>3,626,087</b>	<b>3,917,203</b>	<b>4,239,318</b>	<b>4,588,252</b>	<b>30.1%</b>

When we define coastal regions as shoreline EDs, the growth experience departs considerably from this picture. Rather than experiencing a below-average rate of population growth, shoreline EDs have

actually grown in population by 37.1 per cent over the past 20 years; i.e. seven percentage points above the national average. But differences in the experience of individual FLAG regions are much greater at this level, with the North East (66.5%) experiencing particularly rapid growth, followed by the South East (46.0%), whilst the West (25.2%), North West (21.4%) and North (19.1%) grew at a much lower rate, losing ground in relative terms.

**Table 5.1 RO: Population – Dunmore East**

Dunmore East	1991	1996	2002	2006	2011	Change 1991-2011
Killea	1,161	1,435	1,665	1,453	1,347	16.0
Rathmoylan	551	669	849	926	1,093	98.4
Woodstown	505	550	568	589	601	19.0
<b>Dunmore East A</b>	<b>2,217</b>	<b>2,654</b>	<b>3,082</b>	<b>2,968</b>	<b>3,041</b>	<b>37.2</b>
Faithlegg (Pt.)	1,456	1,513	1,809	1,905	2,104	44.5
Ballyhack	1,205	1,180	1,258	1,232	1,302	8.0
Templetown	441	464	461	575	585	32.7
<b>Dunmore East B</b>	<b>3,102</b>	<b>3,157</b>	<b>3,528</b>	<b>3,712</b>	<b>3,991</b>	<b>28.7</b>
<b>Dunmore East</b>	<b>5,319</b>	<b>5,811</b>	<b>6,610</b>	<b>6,680</b>	<b>7,032</b>	<b>32.2</b>

Population growth in the Dunmore East Harbour Area was somewhere between 32.2 (broad definition) and 37.2 (narrow definition) per cent, depending on how the area is defined and thus similar to the nationally average growth for Coastal EDs (37.1%), but below the growth experienced in the coastal EDs of the South East Region (46.0%).

**Table 5.1 CO %: Population Share of Total Population – Coastal Counties (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	28.7	28.7	28.6	28.6	28.7	-0.1
South East	10.3	10.4	10.5	10.7	10.7	0.4
South West	19.7	19.6	19.3	19.0	18.7	-1.0
West	7.7	7.8	8.0	8.1	8.0	0.3
North West	5.4	5.3	5.1	5.0	5.0	-0.4
North	3.6	3.6	3.5	3.5	3.5	-0.1
<b>Coastal Counties</b>	<b>75.5</b>	<b>75.4</b>	<b>75.1</b>	<b>74.9</b>	<b>74.5</b>	<b>-1.0</b>
<b>Ireland</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>0.0</b>

**Table 5.1 ED %: Population Share of Total Population – Coastal EDs (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	2.9	2.9	3.2	3.5	3.7	0.8
South East	3.0	3.1	3.2	3.3	3.3	0.3
South West	3.9	3.9	4.0	4.0	3.9	0.0
West	2.0	2.0	2.0	1.9	1.9	-0.1
North West	1.7	1.7	1.7	1.6	1.6	-0.1
North	2.2	2.1	2.0	2.0	2.0	0.2
<b>Coastal EDs</b>	<b>15.6</b>	<b>15.7</b>	<b>16.0</b>	<b>16.3</b>	<b>16.5</b>	<b>1.0</b>
<b>Ireland</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>0.0</b>

The last two tables above show how each region's relative share in the respective populations has changed over time. In terms of coastal counties, the South East has increased its population share by 0.4 percentage points, whilst the North West has experienced the greatest decline (-0.4 percentage points). When considering the regions at the level of coastal EDs, however, the North East experienced the greatest increase (0.8 percentage points), followed by the South East (0.3 percentage points), with all other changes being comparatively small.

## 5.2 Age Dependency Rate

The age dependency rate – defined as the percentage of people aged under 15 or over 64 – provides a proxy for emigration. In Ireland, the response to long-term adverse labour market conditions has long been one of emigration, particularly in rural areas. But emigration is socially and demographically selective, as emigrants tend to be of working age and to be better educated. Thus, long-term adverse labour market conditions in rural areas do not necessarily express themselves through higher unemployment rates, but also in terms of a thinning-out of the working-age cohorts, leading to a higher age dependency rate.

The strong performance of the Irish economy over the 1991 to 2006 period resulted in a steady decline in the age dependency rate from 38.1 per cent in 1991 to 31.4 per cent in 2006. Since the onset of the recession in late 2007, and indicative of a return of emigration, the ratio increased once more to reach 33.0 per cent in 2011.

**Table 5.2 CO: Age Dependency Rate – Coastal Counties (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	34.6	32.5	30.1	29.3	30.8	-3.8
South East	39.0	35.8	33.5	32.8	34.6	-4.4
South West	38.3	35.2	32.4	31.6	33.2	-5.1
West	39.5	36.4	32.7	31.7	33.1	-6.4
North West	43.1	39.4	35.7	34.4	35.4	-7.7
North	42.3	38.8	36.0	35.2	36.3	-6.0
<b>Coastal Counties</b>	<b>37.7</b>	<b>34.9</b>	<b>32.1</b>	<b>31.3</b>	<b>32.8</b>	<b>-4.9</b>
<b>Ireland</b>	<b>38.1</b>	<b>35.1</b>	<b>32.3</b>	<b>31.4</b>	<b>33.0</b>	<b>-5.1</b>

There are significant differences in age dependency rates across Ireland. These reflect not only the prevalence of emigration, but also internal rural-urban migration patterns. When defined in terms of counties, the age dependency rate for coastal counties is almost identical to the national average, which is unsurprising as these counties comprise 75 per cent of the total population. There is, however, a strong urban-rural divide, with a higher age dependency rate in the North (36.3%) and North West (35.4%) and a lower rate in the North East (30.8%). These higher rates signal significant differences in economic well-being, implying a higher ratio of dependents to income-earners and a weakening of the labour force as better-educated people of working age leave these areas.

**Table 5.2 ED: Age Dependency Rate – Coastal EDs (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	37.8	34.1	32.0	31.4	34.7	-3.1
South East	38.9	35.8	33.7	33.0	34.9	-4.0
South West	40.4	36.7	34.1	33.4	35.0	-5.4
West	39.7	36.8	33.4	32.3	33.8	-5.9
North West	41.9	38.3	34.6	33.8	34.4	-7.5
North	43.0	39.5	36.7	35.9	37.0	-6.1
<b>Coastal EDs</b>	<b>40.1</b>	<b>36.6</b>	<b>33.9</b>	<b>33.1</b>	<b>34.9</b>	<b>-5.1</b>
<b>Ireland</b>	<b>38.1</b>	<b>35.1</b>	<b>32.3</b>	<b>31.4</b>	<b>33.0</b>	<b>-5.1</b>

A very different picture emerges when we look at age dependency rates for shoreline EDs. Whilst the county-level rates capture the powerful differences that exist between urban centres and other regions, at the ED level, the coastal region is entirely rural and characterised by elevated age dependency rates. For the FLAG South East Region, the trend was almost identical to that of the shoreline EDs as a whole, moving from 38.9 per cent in 1991 to 33.0 per cent in 2006 and increasing to 34.9 per cent in 2011.

**Table 5.2 RO: Age Dependency Rate – Dunmore East (%)**

Dunmore East	1991	1996	2002	2006	2011	Change 1991-2011
Killea	38.8	36.2	32.9	30.9	33.5	-5.3
Rathmoylan	39.4	35.9	35.2	33.6	33.4	-6.0
Woodstown	39.6	38.4	32.7	34.1	36.3	-3.3
<b>Dunmore East A</b>	<b>39.1</b>	<b>36.6</b>	<b>33.5</b>	<b>32.4</b>	<b>34.0</b>	<b>-5.1</b>
Faithlegg (Pt.)	40.6	36.2	34.1	34.1	36.2	-4.4
Ballyhack	38.6	34.3	32.2	34.2	37.9	-.7
Templetown	46.3	39.7	37.7	34.3	37.1	-9.2
<b>Dunmore East B</b>	<b>40.6</b>	<b>36.0</b>	<b>33.9</b>	<b>34.2</b>	<b>36.9</b>	<b>-3.7</b>
<b>Dunmore East</b>	<b>40.0</b>	<b>36.3</b>	<b>33.7</b>	<b>33.4</b>	<b>35.6</b>	<b>-4.4</b>

The age dependency rate for the Dunmore East Harbour Area was initially almost identical to that of the coastal shoreline EDs as a whole and slightly higher than that of the FLAG South East Region. Starting at 40.0 per cent in 1991, this rate fell to 33.4 per cent in 2006 before increasing to 35.6 per cent in 2011, marginally above the regional rate. In the more narrowly-defined area of Dunmore East (A), the rate was consistently marginally below the rate for the Dunmore East area as a whole: 39.1 per cent in 1991, 32.4 per cent in 2006 and 34.0 per cent in 2011.

### 5.3 Lone Parent Rate

The proportion of lone parents (as a proportion of all households with dependent children) has doubled over the past 20 years in Ireland, growing from 10.7 per cent in 1991 to 21.6 per cent in 2011. There are marked differences between urban and rural areas, and lone parent rates in the major cities are twice the national average (e.g. Limerick City, 37.5%).

**Table 5.3 CO: Lone Parent Rate – Coastal Counties (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	14.0	17.9	19.8	24.9	24.5	10.5
South East	10.0	13.2	16.8	21.2	21.8	11.8
South West	9.5	12.5	16.0	20.0	20.1	10.6
West	8.8	11.6	14.4	17.4	17.6	8.8
North West	8.5	10.2	13.2	16.5	18.3	9.7
North	9.5	11.9	15.8	21.6	23.0	13.5
<b>Coastal Counties</b>	<b>11.1</b>	<b>14.3</b>	<b>17.1</b>	<b>21.6</b>	<b>21.8</b>	<b>10.7</b>
<b>Ireland</b>	<b>10.7</b>	<b>13.8</b>	<b>16.7</b>	<b>21.3</b>	<b>21.6</b>	<b>10.9</b>

The lone parent rate for coastal counties as a whole has closely reflected the national average, rising from 11.1 per cent in 1991 to 21.8 per cent in 2011. There are marked differences between the FLAG regions, with the more urban regions having higher rates than the more rural regions. The exception to this is the North region, where this rate increased from just 9.5 per cent in 1991 to 23.0 per cent in 2011. The reasons for this high rate require further study. Lone parent rates in the South East almost resemble the national average and increased from 10.0 per cent (the second highest rate for FLAG regions in 1991) to 21.8 per cent (the third highest rate) in 2011.

The patterns observed for lone parent rates at the level of coastal counties also hold at the level of the coastal regions when defined as shoreline EDs, with an overall rate of 10.2 per cent in 1991, rising to 21.0 per cent in 2011. This is somewhat surprising, as the coastal EDs are more “rural” in character than the coastal counties, which include the five cities of Ireland. The South East Region has the highest rate amongst the FLAG regions, rising from 11.3 per cent to 23.2 per cent over the same period.

**Table 5.3 ED: Lone Parent Rate – Coastal EDs (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	10.9	14.1	17.7	21.3	22.2	11.3
South East	11.3	14.7	18.1	22.2	23.2	11.8
South West	9.8	11.9	15.3	19.0	19.2	9.5
West	9.4	11.8	14.2	17.1	17.2	7.8
North West	9.7	11.0	14.4	18.7	20.7	11.0
North	9.4	11.6	13.9	19.8	21.4	11.9
<b>Coastal EDs</b>	<b>10.2</b>	<b>12.8</b>	<b>16.0</b>	<b>20.1</b>	<b>21.0</b>	<b>10.8</b>
<b>Ireland</b>	<b>10.7</b>	<b>13.8</b>	<b>16.7</b>	<b>21.3</b>	<b>21.6</b>	<b>10.9</b>

Lone parent rates in Dunmore East A were initially lower than the regional rate, reflecting its rural character. By 2006, this had increased to 14.8 per cent, 7.4 percentage points below the average for the South East (22.2%), reaching 19.3 per cent in 2011, compared to 23.2 per cent regionally. The rate for the wider Dunmore East Harbour Area as a whole was consistently lower than for the FLAG South East Region and Dunmore East A. Between 1991 and 2006 the initial 9.8 per cent increased to 13.8 per cent, reaching 16.5 per cent in 2011.

**Table 5.3 RO: Lone Parent Rate – Dunmore East (%)**

Dunmore East	1991	1996	2002	2006	2011	Change 1991-2011
Killea	12.4	12.9	14.8	13.0	21.8	9.4
Rathmoylan	10.8	16.7	19.1	20.0	20.9	10.1
Woodstown	7.9	4.5	9.8	9.1	10.3	2.4
<b>Dunmore East A</b>	<b>11.0</b>	<b>12.1</b>	<b>15.4</b>	<b>14.8</b>	<b>19.3</b>	<b>8.3</b>

## 5.4 Population with Primary Education only

There has been continuous improvement in education attainments amongst the adult population of Ireland over the past 20 years. In 1991, 36.7 per cent of those who had completed their education never went beyond primary school. This figure had halved by 2006 (18.9%) and fell further to reach 16.0 per cent in 2011.

**Table 5.4 CO: Population with Primary Education only – Coastal Counties (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	34.0	26.2	19.5	17.1	14.3	-19.7
South East	36.9	29.5	22.8	19.2	16.3	-20.6
South West	35.4	28.7	21.5	18.1	15.1	-20.3
West	36.2	31.0	22.6	18.5	15.4	-20.8
North West	42.1	37.0	27.9	23.3	19.6	-22.5
North	51.6	43.5	33.7	29.8	26.1	-25.5
<b>Coastal Counties</b>	<b>36.3</b>	<b>29.4</b>	<b>22.1</b>	<b>18.8</b>	<b>15.8</b>	<b>-20.5</b>
<b>Ireland</b>	<b>36.7</b>	<b>29.5</b>	<b>22.2</b>	<b>18.9</b>	<b>16.0</b>	<b>-20.7</b>

For the coastal counties, the improvement in the educational profile of the population closely mirrors that of Ireland as a whole, as expected. The performance of the FLAG South East Region was almost identical to that of the country or the coastal counties as a whole, with the percentage of adults with

no more than a primary school education falling from 36.9 per cent in 1991 to 19.2 per cent in 2006 and 16.3 per cent in 2011.

**Table 5.4 ED: Population with Primary Education only – Coastal EDs (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	32.8	25.9	18.8	15.2	13.0	-19.7
South East	34.2	27.4	21.1	17.6	14.9	-19.3
South West	36.2	29.3	21.4	18.0	14.8	-21.4
West	38.8	33.2	24.8	20.2	16.8	-21.9
North West	39.8	34.9	26.6	23.0	19.1	-20.7
North	52.1	44.1	34.3	30.1	26.0	-26.1
<b>Coastal EDs</b>	<b>38.1</b>	<b>31.4</b>	<b>23.4</b>	<b>19.6</b>	<b>16.5</b>	<b>-21.6</b>
<b>Ireland</b>	<b>36.7</b>	<b>29.5</b>	<b>22.2</b>	<b>18.9</b>	<b>16.0</b>	<b>-20.7</b>

When we define the coastal region in terms of shoreline EDs, a slightly different picture emerges with regard to education levels. In the shoreline EDs, educational levels were historically poorer than at national level, but this differential has narrowed over time. The percentage of people who completed their education having only attended primary school fell rapidly from 38.1 per cent in 1991 to 19.6 per cent in 2006 and 16.5 per cent in 2011. Reflecting this scenario, albeit from a marginally more advantageous starting point, the rate for the FLAG South East shoreline EDs fell from 34.2 per cent in 1991 to 14.9 per cent in 2011.

**Table 5.4 RO: Population with Primary Education only – Dunmore East (%)**

Dunmore East	1991	1996	2002	2006	2011	Change 1991-2011
Killea	29.0	21.1	17.1	14.4	13.7	-15.2
Rathmoylan	30.2	22.9	13.8	13.9	10.2	-19.9
Woodstown	27.5	24.6	17.4	12.4	11.1	-16.4
<b>Dunmore East A</b>	<b>28.9</b>	<b>22.3</b>	<b>16.3</b>	<b>13.9</b>	<b>12.0</b>	<b>-16.9</b>
Faithlegg (Pt.)	34.3	27.1	18.8	15.7	13.6	-20.7
Ballyhack	45.5	40.1	30.8	29.4	25.2	-20.3
Templetown	44.9	34.6	30.2	22.1	20.4	-24.5
<b>Dunmore East B</b>	<b>40.2</b>	<b>33.2</b>	<b>24.7</b>	<b>21.4</b>	<b>18.6</b>	<b>-21.6</b>
<b>Dunmore East</b>	<b>35.5</b>	<b>28.6</b>	<b>21.0</b>	<b>18.1</b>	<b>15.8</b>	<b>-19.8</b>

The educational attainments of the adult population in the broadly-defined Dunmore East Harbour Area are in line with those for the shoreline EDs or coastal counties as a whole. In 1991, one-third of those who had completed education had a primary education only (35.5%), subsequently this rate more than halved over the next 20 to reach 15.8 per cent in 2011. In the narrowly-defined area of Dunmore East (A), 28.9 per cent of the adult population had primary education only in 1991. This figure reduced to almost one-third (12.0%) in 2011, which marks a significant improvement and a rate below the rates for the coastal counties, coastal EDs, South East Region or Dunmore East as a wider-defined area.

## 5.5 Population with Third-level Education

The situation is roughly analogous as far as third-level education is concerned, as the percentage of people who continued their studies beyond secondary school has more than doubled over the past 20 years. In 1991, 13.0 per cent of people in Ireland who had completed their education had attended a third-level institution. This grew to 30.5 per cent in 2006, but increased only marginally between 2006 and 2011, when it reached 30.6 per cent.

**Table 5.5 CO: Population with Third-level Education – Coastal Counties (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	16.4	24.9	32.7	37.3	37.5	21.2
South East	11.3	16.9	22.1	26.8	26.6	15.3
South West	12.7	19.1	25.2	29.5	29.5	16.7
West	14.4	20.4	26.7	31.8	32.6	18.2
North West	10.4	16.0	20.7	25.1	26.0	15.5
North	7.6	13.5	18.3	22.6	23.5	15.9
<b>Coastal Counties</b>	<b>13.7</b>	<b>20.7</b>	<b>27.1</b>	<b>31.7</b>	<b>31.9</b>	<b>18.2</b>
<b>Ireland</b>	<b>13.0</b>	<b>19.7</b>	<b>26.0</b>	<b>30.5</b>	<b>30.6</b>	<b>17.6</b>

The proportion of the coastal counties' population with a third-level education grew from 13.7 per cent in 1991 to 31.7 per cent in 2006, reaching 31.9 per cent in 2011. This 20-year growth is marginally above the national average (18.2 percentage points compared to 17.6 percentage points nationally). Mirroring the situation with regard to low levels of education, the South East Region has a slightly lower percentage of adults with third-level education, rising from 11.3 per cent in 1991 to 26.6 per cent in 2011.

**Table 5.5 ED: Population with Third-level Education – Coastal EDs (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	14.1	21.1	27.7	33.5	31.7	17.6
South East	12.7	18.9	24.1	29.0	29.0	16.3
South West	11.7	18.9	25.2	30.0	29.5	17.8
West	13.3	19.0	24.9	30.4	31.6	18.3
North West	12.5	19.0	24.2	27.7	29.1	16.6
North	8.6	13.7	18.2	22.8	23.8	15.3
<b>Coastal EDs</b>	<b>12.2</b>	<b>18.6</b>	<b>24.4</b>	<b>29.5</b>	<b>29.4</b>	<b>17.2</b>
<b>Ireland</b>	<b>13.0</b>	<b>19.7</b>	<b>26.0</b>	<b>30.5</b>	<b>30.6</b>	<b>17.5</b>

When defined as shoreline EDs, the coastal region has again marginally lower educational rates when compared with the country as a whole or with the coastal counties (those with a third-level education increased from 12.2% in 1991 to 29.4% in 2011). The South East Region started with a marginally better-than-average share of 12.7 per cent in 1991, but experienced a below-average growth in third-level education to amount to 29.0 per cent in 2011; i.e. below the average for coastal EDs.

**Table 5.5 RO: Population with Third-level Education – Dunmore East (%)**

Dunmore East	1991	1996	2002	2006	2011	Change 1991-2011
Killea	13.2	26.8	29.9	33.7	34.5	21.3
Rathmoylan	12.5	17.2	20.0	27.2	30.9	18.4
Woodstown	15.5	25.1	33.2	37.1	38.8	23.2
<b>Dunmore East A</b>	<b>13.6</b>	<b>23.9</b>	<b>28.0</b>	<b>32.5</b>	<b>34.1</b>	<b>20.5</b>
Faithlegg (Pt.)	10.4	19.5	24.8	30.0	32.5	22.1
Ballyhack	6.3	11.2	15.7	19.6	20.4	14.1
Templetown	7.4	16.8	18.5	24.9	26.0	18.6
<b>Dunmore East B</b>	<b>8.4</b>	<b>15.9</b>	<b>20.7</b>	<b>25.6</b>	<b>27.4</b>	<b>19.0</b>
<b>Dunmore East</b>	<b>10.5</b>	<b>19.3</b>	<b>23.9</b>	<b>28.7</b>	<b>30.3</b>	<b>19.7</b>

Initially, the proportion of adults with third-level education in the narrowly-defined area of Dunmore East (A) closely resembled the national rate, accounting for 13.6 per cent in 1991. By 2011, this share had substantially grown to reach one-third (34.1%) of the adult population. When defined as a wider area, Dunmore East was initially characterised by a slightly lower level of adults with third-level education (10.5% in 1991), but with 30.3 per cent in 2011 reached levels almost identical to those of the coastal counties, coastal EDs or South East Region as a whole.

## 5.6 Proportion of Adult Population in Professional Classes

The changes in social class composition experienced throughout Ireland over the past 20 years largely parallel those in educational achievement, with a gradual increase in the number of professionals and a significant decline in the proportion of semi- and unskilled manual workers. At national level, the proportion of professionals rose from 25.2 per cent in 1991 to 34.6 per cent in 2011, an increase of 9.5 percentage points.

**Table 5.6 CO: Proportion of Adult Population in Professional Classes – Coastal Counties (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	28.3	30.5	35.4	35.8	38.7	10.5
South East	25.9	27.3	30.9	32.6	33.9	8.0
South West	24.9	26.9	30.8	32.3	33.5	8.5
West	24.3	27.6	31.4	33.3	35.3	11.0
North West	20.5	23.4	27.7	30.7	31.1	10.6
North	18.6	20.6	24.6	27.5	28.8	10.2
<b>Coastal Counties</b>	<b>25.6</b>	<b>27.8</b>	<b>32.1</b>	<b>33.5</b>	<b>35.4</b>	<b>9.7</b>
<b>Ireland</b>	<b>25.2</b>	<b>27.3</b>	<b>31.6</b>	<b>32.9</b>	<b>34.6</b>	<b>9.5</b>

The class composition of the coastal counties in terms of the proportion of people living in households where the reference person is in the higher or lower professional classes is just marginally above the country as a whole, rising from 25.6 per cent in 1991 to 35.4 per cent in 2011. The share of professionals in the FLAG South East Region (25.9%) was marginally higher than the average for 1991 and increased to 33.9 per cent over the next 20 years, which is below the coastal counties (35.4%) and the national average (34.6%).

**Table 5.6 ED: Proportion of Adult Population in Professional Classes – Coastal EDs (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	29.8	30.9	35.4	35.5	37.2	7.4
South East	27.4	28.6	32.6	34.5	35.9	8.5
South West	23.8	26.3	31.1	33.1	34.4	10.5
West	22.8	25.8	30.4	33.2	35.3	12.5
North West	22.8	25.6	29.6	32.1	32.2	9.4
North	19.0	20.7	25.0	28.0	29.2	10.2
<b>Coastal EDs</b>	<b>24.7</b>	<b>26.7</b>	<b>31.2</b>	<b>33.2</b>	<b>34.6</b>	<b>9.9</b>
<b>Ireland</b>	<b>25.2</b>	<b>27.3</b>	<b>31.6</b>	<b>32.9</b>	<b>34.6</b>	<b>9.5</b>

When defining coastal regions in terms of shoreline EDs, the proportion of the adult population in the professional classes almost exactly matches that of Ireland as a whole. The South East Region had the second highest share in 1991 at 27.4 per cent, but experienced the second lowest growth in professionals amongst the FLAG regions, at 8.5 percentage points over the 20-year period, compared to 9.9 percentage points for the shoreline EDs and 9.5 percentage points for Ireland as a whole. This notwithstanding, the region retained its position with the second highest share in professional classes.

**Table 5.6 RO: Proportion of Adult Population in Professional Classes – Dunmore East (%)**

Dunmore East	1991	1996	2002	2006	2011	Change 1991-2011
Killea	22.1	27.3	30.8	41.0	41.4	19.2
Rathmoylan	31.8	31.5	30.9	35.1	39.3	7.6
Woodstown	37.4	48.4	53.3	55.5	49.1	11.7
<b>Dunmore East A</b>	<b>28.0</b>	<b>32.7</b>	<b>34.9</b>	<b>42.0</b>	<b>42.2</b>	<b>14.1</b>
Faithlegg (Pt.)	28.8	28.9	38.2	41.2	43.4	14.6
Ballyhack	19.2	18.9	22.7	26.2	27.6	8.4
Templetown	29.3	28.0	29.3	34.6	31.8	2.5
<b>Dunmore East B</b>	<b>25.1</b>	<b>25.0</b>	<b>31.5</b>	<b>35.2</b>	<b>36.5</b>	<b>11.4</b>
<b>Dunmore East</b>	<b>26.3</b>	<b>28.5</b>	<b>33.1</b>	<b>38.2</b>	<b>39.0</b>	<b>12.6</b>

When defined narrowly, Dunmore East (A) experienced an above-average increase in the proportion of professionals at 14.1 percentage points for this 20-year period. In 2011, professionals accounted for 42.2 per cent of the adult population in this area, a distinctly higher proportion than found at the national level, the level of coastal counties or shoreline EDs. The wider Dunmore East Harbour Area also experienced a higher-than-average increase in the share of professionals at 12.6 percentage points over the past 20 years, reaching 39.0 per cent in 2011.

## 5.7 Proportion of Adult Population in Semi- and Unskilled Manual Classes

Mirroring the gradual increase in the number of professionals, the past two decades have seen a significant decline in the proportion of semi- and unskilled manual workers. At national level, the proportion of people living in households where the reference person was classified as part of the semi- and unskilled classes declined from 28.2 per cent in 1991 to 17.5 per cent in 2011, representing a decline of 10.6 percentage points.

**Table 5.7 CO: Proportion of Population in Semi- and Unskilled Classes – Coastal Counties (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	24.8	21.8	17.2	16.5	15.3	-9.6
South East	29.3	26.0	21.8	19.7	18.8	-10.5
South West	28.8	24.9	21.5	19.5	18.4	-10.4
West	26.7	23.6	20.0	18.1	16.9	-9.8
North West	32.5	27.1	23.2	20.0	19.1	-13.3
North	40.4	35.3	27.2	23.5	21.5	-18.9
<b>Coastal Counties</b>	<b>27.9</b>	<b>24.4</b>	<b>20.2</b>	<b>18.5</b>	<b>17.3</b>	<b>-10.7</b>
<b>Ireland</b>	<b>28.2</b>	<b>24.4</b>	<b>20.2</b>	<b>18.6</b>	<b>17.5</b>	<b>-10.6</b>

The decline of the semi- and unskilled classes in the coastal counties was practically identical to that experienced in the country as a whole, whilst the share in the South East Region remained marginally above-average: 29.3 per cent in 1991 and 18.8 per cent in 2011.

**Table 5.7 ED: Proportion of Population in Semi- and Unskilled Classes – Coastal EDs (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	25.6	23.1	18.2	16.7	15.5	-10.1
South East	28.3	25.9	21.4	18.8	17.6	-10.6
South West	30.5	26.4	22.3	19.2	18.1	-12.4
West	32.0	29.3	23.0	19.5	17.6	-14.4
North West	33.4	28.3	23.4	20.3	19.4	-14.0
North	40.7	36.7	28.1	24.4	22.5	-18.2
<b>Coastal EDs</b>	<b>31.0</b>	<b>27.6</b>	<b>22.2</b>	<b>19.4</b>	<b>18.0</b>	<b>-13.0</b>
<b>Ireland</b>	<b>28.2</b>	<b>24.4</b>	<b>20.2</b>	<b>18.6</b>	<b>17.5</b>	<b>-10.6</b>

When looking at the coastal region in terms of shoreline EDs, the share of people in the semi- and unskilled classes is slightly higher, both when compared to the coastal counties or to Ireland as a whole. The share of the lower classes in the South East Region declined from 28.3 per cent in 1991 to 17.6 per cent in 2011. This represents a decrease of 10.6 percentage points, slightly below the decrease of 13.0 per cent registered for the coastal EDs, but identical the nationally experienced decline. It also leaves the levels at exactly the national averages.

**Table 5.7 RO: Proportion of Population in Semi- and Unskilled Classes – Dunmore East (%)**

Dunmore East	1991	1996	2002	2006	2011	Change 1991-2011
Killea	28.4	29.4	24.7	20.0	18.2	-10.3
Rathmoylan	21.7	29.5	28.0	20.0	19.4	-2.3
Woodstown	26.5	18.6	12.9	9.1	9.7	-16.8
<b>Dunmore East A</b>	<b>26.3</b>	<b>27.0</b>	<b>23.1</b>	<b>17.7</b>	<b>16.9</b>	<b>-9.3</b>

Ballyhack	29.2	37.5	27.8	24.2	23.8	-5.5
Templetown	30.2	26.2	23.8	14.4	21.1	-9.1
<b>Dunmore East B</b>	<b>28.3</b>	<b>32.8</b>	<b>23.7</b>	<b>19.9</b>	<b>19.5</b>	<b>-8.8</b>
<b>Dunmore East</b>	<b>27.5</b>	<b>30.3</b>	<b>23.5</b>	<b>18.9</b>	<b>18.4</b>	<b>-9.1</b>

The semi-and unskilled social classes are marginally less prevalent in the narrowly-defined area of Dunmore East (A.) The share of people in these classes declined from 26.3 per cent in 1991 to 16.9 per cent in 2011 (9.3 percentage points), the latter figure remains marginally below that observed in the coastal counties and coastal EDs as a whole as well as the national percentage. In the wider Dunmore East Harbour Area, the semi- and unskilled social classes experienced a decline of 9.1 percentage points, from 27.5 per cent in 1991 to 18.4 per cent in 2011.

## 5.8 Male Unemployment

Of all census indicators used in the development of the HP Deprivation Index, the economic downturn after 2007 most strongly affected the unemployment rates. Unemployment broadly halved over the 15-year period from 1991 to 2006, but the very rapid subsequent increase has pushed the unemployment rates above their 1991 levels. Particular attention will therefore be paid to the change in trends for the 1991 to 2006 period, on the one hand, and the five-year period from 2006 to 2011, on the other. Nationally, the male unemployment rate fell from 18.4 per cent in 1991 to 8.8 per cent in 2006, before rising to 22.3 per cent in 2011.

**Table 5.8 CO: Male Unemployment Rates – Coastal Counties (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	19.9	17.5	9.5	9.3	20.2	.3
South East	19.1	16.8	9.6	9.2	25.2	6.1
South West	17.4	15.7	9.0	8.1	21.0	3.5
West	15.8	14.6	9.2	8.6	21.7	6.0
North West	16.8	16.9	11.2	9.1	23.3	6.6
North	29.3	26.4	17.5	14.4	31.4	2.0
<b>Coastal Counties</b>	<b>18.9</b>	<b>17.0</b>	<b>9.8</b>	<b>9.1</b>	<b>22.0</b>	<b>3.0</b>
<b>Ireland</b>	<b>18.4</b>	<b>16.4</b>	<b>9.4</b>	<b>8.8</b>	<b>22.3</b>	<b>4.0</b>

Male unemployment rates for the coastal counties closely reflect those prevailing nationally, falling from 18.9 per cent in 1991 to 9.1 per cent in 2006 and subsequently rising to 22.0 in 2011. The South East Region had an even worse experience, with male unemployment increasing by 6.1 percentage points over the 20 year-period (compared to 3.9 percentage points nationally and 3.1 percentage points for coastal counties). Starting with a male unemployment rate of 19.1 per cent in 1991, it fell to

9.2 per cent in 2006 and rose to 25.2 per cent in 2011. The region thus has the second-highest male unemployment rate amongst the FLAG regions defined at county level.

**Table 5.8 ED: Male Unemployment Rates – Coastal EDs (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	19.3	16.7	10.2	8.8	21.7	2.4
South East	19.2	16.7	9.8	9.3	25.5	6.3
South West	17.3	15.5	8.9	7.8	21.2	3.9
West	21.6	19.6	12.0	10.2	23.4	1.8
North West	20.1	21.4	13.0	10.2	24.0	3.9
North	30.9	27.0	18.4	15.1	31.8	.9
<b>Coastal EDs</b>	<b>20.7</b>	<b>18.6</b>	<b>11.3</b>	<b>9.7</b>	<b>23.9</b>	<b>3.2</b>
<b>Ireland</b>	<b>18.4</b>	<b>16.4</b>	<b>9.4</b>	<b>8.8</b>	<b>22.3</b>	<b>4.0</b>

The male unemployment rate in the shoreline EDs were slightly above the national averages throughout the 20 year-period examined, first falling from 20.7 per cent in 1991 to 9.7 per cent in 2006 and subsequently rising to 23.9 per cent in 2011. The rate observed in the South East Region moved from 19.2 per cent in 1991 to 9.3 per cent in 2006 and reached 25.5 per cent in 2011, and thus closely resemble the regional rates measured at the level of coastal counties.

**Table 5.8 RO: Male Unemployment Rates – Dunmore East (%)**

Dunmore East	1991	1996	2002	2006	2011	Change 1991-2011
Killea	22.6	13.3	8.6	7.0	23.4	.8
Rathmoylan	19.0	22.9	7.2	7.8	21.7	2.6
Woodstown	13.2	13.1	7.1	5.3	12.8	-.4
<b>Dunmore East A</b>	<b>19.6</b>	<b>15.5</b>	<b>8.0</b>	<b>7.0</b>	<b>20.9</b>	<b>1.3</b>
Faithlegg (Pt.)	20.2	18.0	9.5	6.7	19.9	-.2
Ballyhack	19.4	17.7	9.0	7.7	31.2	11.8
Templetown	18.1	5.6	5.2	5.0	22.6	4.5
<b>Dunmore East B</b>	<b>19.6</b>	<b>16.1</b>	<b>8.8</b>	<b>6.7</b>	<b>23.8</b>	<b>4.3</b>
<b>Dunmore East</b>	<b>19.6</b>	<b>15.8</b>	<b>8.4</b>	<b>6.8</b>	<b>22.5</b>	<b>2.9</b>

Male unemployment in the narrowly-defined area of Dunmore East (A) was at 19.6 per cent marginally above the national average (18.4%) in 1991. By 2006, this had fallen 7.0 per cent, compared to 8.8 per cent nationally. Since the downturn in economic fortunes, the male unemployment rate in Dunmore East (A) climbed back to 20.9 per cent, 1.3 percentage points above their 1991 levels. This compares to a rate of 23.9 per cent for coastal EDs in general and 22.3 per cent for the country as a whole. The male unemployment rate for the wider-defined Dunmore East Harbour Area fell from an identical 19.6 per cent in 1991 to 6.8 per cent in 2006. In 2011, it passed its initial level by 2.9 percentage points to reach 22.5 per cent, almost identical to the male unemployment levels experienced nationally (22.3%) and at the level of the coastal counties (22.0%).

## 5.9 Female Unemployment

Female unemployment rates are considerably lower than the male rates, but did not fall at the same pace during the economic boom, primarily due to the rise in female labour force participation. Nationally, the female unemployment rate fell from 14.1 per cent in 1991 to 8.1 per cent in 2006, and nearly doubled by 2011, accounting for 15.0 per cent of the economically-active female population.

**Table 5.9 CO: Female Unemployment Rates – Coastal Counties (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	15.2	12.6	7.9	8.1	13.9	-1.3
South East	14.8	12.6	8.5	8.2	16.2	1.5
South West	13.3	11.8	7.4	7.6	14.1	.7
West	12.3	10.7	7.8	8.0	14.5	2.2
North West	12.2	11.3	7.8	7.6	14.0	1.8
North	17.2	14.4	12.6	10.8	19.4	2.2
<b>Coastal Counties</b>	<b>14.4</b>	<b>12.2</b>	<b>8.0</b>	<b>8.1</b>	<b>14.6</b>	<b>.2</b>
<b>Ireland</b>	<b>14.1</b>	<b>12.0</b>	<b>8.0</b>	<b>8.1</b>	<b>15.0</b>	<b>.9</b>

Female unemployment rates for the coastal counties as a whole closely resemble the national average. Starting at 14.4 per cent in 1991, this rate fell to 8.1 per cent in 2006 and rose thereafter to 14.6 per cent, marginally below the nationally rate of 15.0 per cent. The South East Region also mirrored the rate for the coastal counties and the national average. Starting from a marginally higher rate in 1991 at 14.8 per cent, the rate fell to 8.2 per cent in 2006 and subsequently rose to 16.2 per cent in 2011, 1.2 percentage point above the national rate.

**Table 5.9 ED: Female Unemployment Rates – Coastal EDs (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	16.7	12.1	9.8	8.9	16.4	-.3
South East	14.8	12.1	8.5	7.7	16.6	1.8
South West	13.8	12.1	7.4	7.4	13.9	.0
West	15.2	13.2	9.0	8.4	15.2	.0
North West	13.2	12.4	7.9	7.0	14.2	1.0
North	18.3	14.9	12.7	10.7	18.9	.6
<b>Coastal EDs</b>	<b>15.3</b>	<b>12.6</b>	<b>9.0</b>	<b>8.3</b>	<b>15.8</b>	<b>.5</b>
<b>Ireland</b>	<b>14.1</b>	<b>12.0</b>	<b>8.0</b>	<b>8.1</b>	<b>15.0</b>	<b>.9</b>

When we define the coastal regions in terms of shorelines EDs, we observe marginally higher female unemployment rates, roughly one percentage point above the national rate. The South East Region also follows a similar curve, with female unemployment at 14.8 per cent in 1991, falling to 7.7 per cent in 2006 and rising to 16.6 per cent in 2011.

**Table 5.9 RO: Female Unemployment Rates – Dunmore East (%)**

Dunmore East	1991	1996	2002	2006	2011	Change 1991-2011
Killea	22.3	15.7	8.6	7.9	15.9	-6.4
Rathmoylan	9.4	15.6	7.5	8.2	18.4	9.0
Woodstown	21.7	5.2	7.4	5.3	8.9	-12.7
<b>Dunmore East A</b>	<b>19.3</b>	<b>13.5</b>	<b>8.0</b>	<b>7.5</b>	<b>15.6</b>	<b>-3.8</b>
Faithlegg (Pt.)	19.5	15.5	8.0	5.6	9.2	-10.3
Ballyhack	17.7	15.8	10.3	6.4	15.5	-2.2
Templetown	13.5	12.9	7.1	2.4	20.6	7.1
<b>Dunmore East B</b>	<b>18.2</b>	<b>15.2</b>	<b>8.7</b>	<b>5.5</b>	<b>12.8</b>	<b>-5.5</b>
<b>Dunmore East</b>	<b>18.8</b>	<b>14.4</b>	<b>8.4</b>	<b>6.4</b>	<b>14.1</b>	<b>-4.7</b>

In 1991, the female unemployment rate for the narrowly-defined area of Dunmore East (A) (19.3%) exceeded the national rate by roughly four percentage points. The rate fell to 7.5 per cent in 2006 and rose again to 15.6 per cent in 2011, a figure in line with the rates for coastal counties, shoreline EDs and Ireland. Similarly, the wider Harbour Area of Dunmore East experienced a level of female unemployment at 18.8 per cent in 1991, falling to 6.4 per cent in 2006 and rising to 14.1 per cent in 2011.

## 5.10 Housing

The last socio-economic indicator that we will discuss is the provision of local authority housing.

**Table 5.10 CO: Local Authority Housing – Coastal Counties (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	12.7	10.3	8.3	8.6	8.5	-4.2
South East	10.1	9.0	8.1	8.0	9.0	-1.1
South West	9.2	8.1	7.2	7.4	7.8	-1.5
West	5.8	5.2	4.7	5.1	5.8	.0
North West	5.8	5.7	5.6	5.8	6.2	.4
North	6.5	6.3	6.1	7.4	8.4	1.9
<b>Coastal Counties</b>	<b>10.0</b>	<b>8.5</b>	<b>7.3</b>	<b>7.6</b>	<b>7.9</b>	<b>-2.1</b>
<b>Ireland</b>	<b>9.8</b>	<b>8.3</b>	<b>7.1</b>	<b>7.5</b>	<b>7.9</b>	<b>-1.8</b>

There has been a 1.9 percentage point decrease in the proportion of local authority housing in Ireland over the past 20 years (from 9.8% in 1991 to 7.9% in 2011). Social housing provision contracted during the first decade by more than one quarter, but rose slightly over the subsequent ten years. The proportion of social housing in the coastal counties declined by 2.1 percentage points, from 10.0 per cent in 1991 to 7.9 per cent in 2011. The provision of social housing in the South East Region developed similarly over the past 20 years, with local authority rented housing accounting for 10.1 per cent in 1991 and 9.0 per cent in 2011.

**Table 5.10 ED: Local Authority Housing – Coastal EDs (%)**

FLAG Area	1991	1996	2002	2006	2011	Change 1991-2011
North East	9.8	7.8	6.4	6.2	7.3	-2.5
South East	9.7	8.5	7.6	7.7	8.5	-1.2
South West	6.6	6.2	5.8	6.1	7.0	.4
West	5.6	5.0	4.5	4.7	5.3	-.3
North West	5.4	5.7	6.0	6.5	7.2	1.8
North	5.9	5.8	5.6	6.6	7.7	1.8
<b>Coastal EDs</b>	<b>7.4</b>	<b>6.7</b>	<b>6.1</b>	<b>6.4</b>	<b>7.3</b>	<b>-.1</b>
<b>Ireland</b>	<b>9.8</b>	<b>8.3</b>	<b>7.1</b>	<b>7.5</b>	<b>7.9</b>	<b>-1.8</b>

Social housing provision in the shoreline EDs is below that observed in the coastal counties, which is unsurprising as the shoreline EDs exclude the major population centres. Social housing in the shoreline EDs accounted for 7.4 per cent in 1991, falling to 6.1 per cent in 2002, and rising thereafter to 7.3 per cent, returning to the level observed 20 years earlier.

**Table 5.10 RO: Local Authority Housing – Dunmore East (%)**

Dunmore East	1991	1996	2002	2006	2011	Change 1991-2011
Killea	7.9	6.0	4.5	3.4	6.0	-1.9
Rathmoylan	1.9	8.5	12.7	11.3	9.6	7.7
Woodstown	2.0	.9	.0	.0	.0	-2.0
<b>Dunmore East A</b>	<b>5.1</b>	<b>5.6</b>	<b>6.0</b>	<b>5.2</b>	<b>6.1</b>	<b>1.1</b>
Faithlegg (Pt.)	4.4	4.4	4.3	3.4	5.8	1.4
Ballyhack	7.6	5.4	3.5	2.6	3.7	-3.9
Templetown	3.9	2.2	.7	.5	1.0	-3.0
<b>Dunmore East B</b>	<b>5.6</b>	<b>4.4</b>	<b>3.5</b>	<b>2.7</b>	<b>4.4</b>	<b>-1.2</b>
<b>Dunmore East</b>	<b>5.3</b>	<b>4.9</b>	<b>4.6</b>	<b>3.8</b>	<b>5.1</b>	<b>-.2</b>

The narrowly-defined area of Dunmore East (A) has an even lower level of local authority accommodation. In 1991, this accounted for just 5.1 per cent and remained at this level for the next 15 years. A small increase was observed between 2006 and 2011, reaching 6.1 per cent in 2011. The greater Dunmore East Harbour Area had a share of local authority rented housing of 5.3 per cent in 1991. In the subsequent 15 years this level declined to just 3.8 per cent and rose thereafter to 5.1 per cent in 2011.

## 5.11 Relative Affluence and Deprivation

In the previous ten sections, we analysed developments in relation to ten socio-economic indicators of relative affluence and deprivation over the past twenty years, as they apply to the country as a whole, the coastal counties, the shoreline EDs and the harbour area which is the focus of this report. In this section, we draw these observations together to form a single multivariate index, the Pobal HP Deprivation Index.

The Pobal HP Deprivation Index is well-established throughout Ireland and used across a large number of Government Departments and State Agencies and in the community sector. A more detailed description of the Index is provided in the appendix to this profile.

Attention, however, is drawn to the fact that the present report is based on the analysis carried out at the level of Electoral Divisions (ED), and differs from that based on the new census geography of Small Areas (SA), developed jointly by the Ordnance Survey of Ireland (OSI) and the Central Statistics Office (CSO) and displayed on the Pobal Maps and AIRO websites<sup>5</sup>.

We present a comparison of the de-trended HP scores which are centred on zero for each census wave and have a standard deviation of ten. The Ireland scores shown in table 5.11 CO do not have a mean of zero, but are close to zero, as they are weighted by population.

**Table 5.11 CO: Relative Affluence and Deprivation – Coastal Counties**

FLAG Area	HP 1991 relative	HP 1996 relative	HP 2002 relative	HP 2006 relative	HP 2011 relative	Change 1991-2011
North East	5.7	6.5	6.5	4.7	7.9	2.2
South East	.7	1.0	.6	-.6	-.9	-1.5
South West	2.9	3.4	3.5	2.3	3.1	.2
West	4.4	4.1	4.0	3.3	4.2	-.2
North West	-1.5	-2.0	-2.2	-1.7	-1.3	.2
North	-10.0	-9.0	-9.4	-9.1	-7.7	2.3
<b>Coastal Counties</b>	<b>2.9</b>	<b>3.3</b>	<b>3.3</b>	<b>2.1</b>	<b>3.7</b>	<b>.8</b>
<b>Ireland</b>	<b>2.5</b>	<b>3.0</b>	<b>2.9</b>	<b>1.7</b>	<b>2.8</b>	<b>.3</b>

The scores for the coastal counties as a whole once again closely match the scores for Ireland. However, there are significant differences between the six FLAG regions, which reflect those highlighted above with respect to the individual indicators.

The most affluent of the six FLAG regions is the North East, with a Relative HP Index score of 5.7 in 1991, increasing by 2.2 points to 7.9 in 2011. This is followed by the West, with a Relative HP Index score of 4.4 in 1991 and 4.2 in 2011. The third most affluent region is the South West, with a score of 2.9 in 1991, increasing to 3.1 in 2011. These three regions are the more affluent ones and each has maintained its position of relative affluence over the past twenty years.

The fourth most affluent region is the South East, with a relative HP Index score of 0.7 in 1991, which is below the national average of 2.5. Furthermore, the South East has experienced the largest relative decline over the twenty year period, with a drop of 1.5 points on the Index, yielding a Relative HP

<sup>5</sup> <http://maps.pobal.ie/#> and <http://airomaps.nuim.ie/flexviewer/?config=AIDeplIndex.xml>.

Index score of -0.9 in 2011, which is well below the national average. The North West falls into the same category as the South East, as it is significantly below the national average, with a Relative HP Index score of -1.5 in 1991, improving marginally to -1.3 in 2011. The North is by far the most deprived region, with a low Relative HP Index score of -10.0 in 1991. Although this region experienced the largest improvement in its relative HP Index score, it still scored -7.7 in 2011.

**Table 5.11 ED: Relative Affluence and Deprivation – Coastal EDs**

FLAG Area	HP 1991 relative	HP 1996 relative	HP 2002 relative	HP 2006 relative	HP 2011 relative	Change 1991-2011
North East	3.5	4.3	4.5	4.0	4.4	1.1
South East	2.1	2.7	1.9	.8	.5	-1.6
South West	1.3	2.6	3.4	2.7	2.9	1.6
West	.4	.3	.9	1.1	2.7	2.3
North West	-1.0	-1.6	-.6	-1.1	.1	1.1
North	-10.2	-9.4	-9.8	-9.1	-7.8	2.4
<b>Coastal EDs</b>	<b>-.1</b>	<b>.6</b>	<b>.9</b>	<b>.6</b>	<b>1.2</b>	<b>1.3</b>
<b>Ireland</b>	<b>2.5</b>	<b>3.0</b>	<b>2.9</b>	<b>1.6</b>	<b>2.8</b>	<b>.3</b>

Interestingly, the observations made with regard to relative affluence and deprivation do not alter significantly when we change scale. Whether we look at the coastal counties or shoreline EDs, the North East is still the most affluent region, although the relative HP Index scores are slightly lower than for the coastal counties. The ranking between the next two regions changes, with the South West being the second most affluent region, closely followed by the West. At this level of observation, the West rather than the North East has experienced the greatest improvement in its relative position over the period in question. The South East and North West occupy the next two positions, as before, and closely match the average for coastal EDs as a whole. As before, the North is by far the most disadvantaged of the FLAG regions, and the scores for its shoreline EDs is almost identical to those for coastal counties.

**Table 5.11 RO: Relative Affluence and Deprivation – Dunmore East**

Dunmore East	1991	1996	2002	2006	2011	Change 1991-2011
Killea	1.1	10.0	7.1	6.5	3.3	2.2
Rathmoylan	3.7	.9	3.5	1.1	4.3	.5
Woodstown	7.4	8.9	10.7	12.3	13.0	5.5
<b>Dunmore East A</b>	<b>3.2</b>	<b>7.4</b>	<b>6.8</b>	<b>6.0</b>	<b>5.6</b>	<b>2.3</b>
Faithlegg (Pt.)	-.9	1.0	4.9	5.4	6.3	7.2
Ballyhack	-6.4	-5.8	-4.9	-5.7	-9.8	-3.4
Templetown	-5.3	6.2	-.1	4.4	-3.0	2.3
<b>Dunmore East B</b>	<b>-3.6</b>	<b>-.7</b>	<b>.8</b>	<b>1.6</b>	<b>-.3</b>	<b>3.3</b>
<b>Dunmore East</b>	<b>-.8</b>	<b>3.0</b>	<b>3.6</b>	<b>3.5</b>	<b>2.2</b>	<b>3.0</b>

The narrowly-defined area of Dunmore East (A) is slightly more affluent than the South Eastern Region or the country as a whole. In 1991, the Relative HP Index score for Dunmore East A was 3.2, which means that this is an area marginally above average. Following a moderate improvement of 2.4 index points over the 20-year period, the Index score in 2011 was 5.6, which still classifies the areas as marginally above average. It is also worth noting that of the three EDs which make up the narrowly-defined area of Dunmore East (A), Woodstown is an affluent area, whilst the other two EDs are just marginally above average. The wider Dunmore East Harbour Area was initially more deprived than the more narrowly-defined Dunmore East (A) area, with an Index score of -0.8 in 1991, which classified the wider Harbour area as marginally below average. However, over the 20-year period the relative position of the area slightly improved, reaching an Index score of 2.2 in 2011, which means this area is now marginally above the national average.

## 6 Indicators specific to the Fishing Industry

This section provides additional data on the Fishing Industry. Data are provided for the number of vessel owners and the tonnage of the fishing fleet as well as the number of enterprises involved in fishing-related industries.

### 6.1 Fishing Vessels Owners

Information on the number of fishing vessel owners and the tonnage of the fishing fleet is provided in the annual listing of fishing vessel owners compiled by the Department of Agriculture<sup>6</sup>. By the end of 2012, Ireland had just under 2,200 owners of fishing vessels, with a combined tonnage of nearly 65,000 gross tons.

**Table 6.1 CO: Owners and Tonnage of Fishing Vessels – Coastal Counties**

FLAG Area	Number of Owners	Owners %	Owners per 1,000 Population	Tonnage gross-tons	Tonnage %	Tonnage per 1,000 Population
North East	148	6.7	0.1	5,764	8.9	4
South East	271	12.3	0.6	7,778	12.1	16
South West	706	32.1	0.8	16,232	25.1	19
West	434	19.8	1.2	5,687	8.8	15
North West	238	10.8	1.0	1,128	1.7	5
North	393	17.9	2.4	27,911	43.2	173
<b>Coastal Counties</b>	<b>2,190</b>	<b>99.7</b>	<b>0.6</b>	<b>64,500</b>	<b>99.9</b>	<b>19</b>
<b>Ireland</b>	<b>2,196</b>	<b>100.0</b>	<b>0.5</b>	<b>64,548</b>	<b>100.0</b>	<b>14</b>

As highlighted in previous sections, the coastal counties account for about three quarter of Ireland's population, but practically all fishing vessel owners (99.7%) and 99.9 per cent of the gross tonnage. There are some variations between FLAG regions, with the South West accounting for nearly one third of vessel owners and one quarter of total tonnage. The West region has the second largest share in vessel owners, but only the fourth largest share in the tonnage, reflecting the smaller average size of fishing vessels in the West. The reverse applies to the North, where we find only 17.9 per cent of vessel owners, but 43.2 per cent of total tonnage, which is obviously due to the very large vessels located in Killary Harbour.

**Table 6.1 ED: Owners and Tonnage of Fishing Vessels – Coastal EDs**

FLAG Area	Number of Owners	Owners %	Owners per 1,000 Population	Tonnage gross-tons	Tonnage %	Tonnage per 1,000 Population
North East	123	5.6	0.7	5,465	8.5	32
South East	247	11.2	1.6	7,657	11.9	50
South West	669	30.5	3.7	15,814	24.5	88
West	368	16.8	4.2	3,866	6.0	44
North West	219	10.0	3.1	1,060	1.6	15
North	372	16.9	4.1	27,831	43.1	304
<b>Coastal EDs</b>	<b>1,998</b>	<b>91.0</b>	<b>2.6</b>	<b>61,693</b>	<b>95.6</b>	<b>82</b>
<b>Ireland</b>	<b>2,196</b>	<b>100.0</b>	<b>0.5</b>	<b>64,548</b>	<b>100.0</b>	<b>14</b>

A slightly more nuanced picture emerges when looking at shoreline EDs. Whilst the regional shares in terms of vessel owners and tonnage closely resemble the analysis at the level of coastal counties, the most striking observation relates to the extent to which vessel owners are concentrated in the

<sup>6</sup> Available at <http://ec.europa.eu/fisheries/fleet/index.cfm> , accessed in January 2013.

shoreline EDs themselves. Only 9 per cent of vessel owners reside outside the shoreline EDs, and these account for less than 5 per cent of total tonnage (see Figure 3). As a consequence, and as one would expect, fishing is of proportionally greater importance when we define the FLAG regions in terms of shoreline EDs rather than coastal counties. When defined as coastal counties, there are only 0.6 owners (or 19 gross tons) per 1,000 population; when this is defined as shoreline EDs, the figures rise about fivefold to 2.6 owners and 82 gross tons per 1,000 population.

**Table 6.1 RO: Owners and Tonnage of Fishing Vessels – Dunmore East**

Dunmore East	Number of Owners	Owners %	Owners per 1,000 Population	Tonnage gross-tons	Tonnage %	Tonnage per 1,000 Population
Killea	18	.8	13	750	1.2	557
Rathmoylan	11	.5	10	342	.5	313
Woodstown	0	.0	0	0	.0	0
<b>Dunmore East A</b>	<b>29</b>	<b>1.3</b>	<b>10</b>	<b>1092</b>	<b>1.7</b>	<b>359</b>
Faithlegg (Pt.)	18	.8	9	139	.2	66
Ballyhack	13	.6	10	525	.8	403
Templetown	6	.3	10	37	.1	64
<b>Dunmore East B</b>	<b>37</b>	<b>1.7</b>	<b>9</b>	<b>701</b>	<b>1.1</b>	<b>176</b>
<b>Dunmore East</b>	<b>66</b>	<b>3.0</b>	<b>9</b>	<b>1,793</b>	<b>2.8</b>	<b>255</b>

As is the case in all the other regions, only a small proportion of the South East’s fishing vessel owners reside within the region’s major harbour area. Only 29 out of 271 of the region’s vessel owners live in the narrowly-defined harbour area, and 66 live in the wider-defined harbour area.

In terms of the number of owners per 1,000 population, fishing is about 20 times more important to the local economy (both narrowly and widely-defined) as for Ireland as a whole, nearly four times more important than for the shoreline EDs, and more than six times as important compared to the shoreline EDs of the South East Region. This being said, there is only one vessel owner per hundred population in Dunmore East.

## 6.2 Number of Firms in Fishing-related Industries

The data used to construct Table 6.2 are based on an analysis of the NACE categorisation contained in the Geodirectory. There are four NACE codes which relate to fishing industries:

- NACE A.03.10: Fishing
- NACE A.03.21: Aquaculture
- NACE C.10.20: Processing
- NACE G.46.38: Wholesale

**Table 6.2 CO: Number of Firms in Fishing-related Industries – Coastal Counties**

FLAG Area	Fishing	Aqua-culture	Process-ing	Whole-sale	Fishing	Aqua-culture	Process-ing	Whole-sale
	#	#	#	#	per m capita	per m capita	per m capita	per m capita
North East	11	1	7	11	8	1	5	8
South East	7	9	9	12	14	18	18	24
South West	40	13	19	18	47	15	22	21
West	10	24	9	7	27	65	24	19
North West	12	17	13	6	53	75	57	26
North	21	15	28	4	130	93	174	25
<b>Coastal Counties</b>	<b>101</b>	<b>79</b>	<b>85</b>	<b>58</b>	<b>30</b>	<b>23</b>	<b>25</b>	<b>17</b>
<b>Ireland</b>	<b>128</b>	<b>92</b>	<b>88</b>	<b>63</b>	<b>28</b>	<b>20</b>	<b>19</b>	<b>14</b>

In total, the Geodirectory identifies 371 commercial address points which are related to the four fishing industries. Of these, 323 (87.3%) are located within the coastal counties that make up the six FLAG regions. Expressed as a density measure, there is approximately one fishing-related industry per 10,000 people.

The largest number of fishing-related industries is found in the South West region, which accounts for 90 out of 371 enterprises, or nearly one quarter of the total. However, when taken relative to population, the fishing-related industry is of greatest importance in the North, with about 4 enterprises per 10,000 capita, twice the density of the North West, where this industry has the second-greatest incidence.

Regional differences are also important when looking at enterprises. Fishing and fish processing has by far the greatest importance in the North, whilst aquaculture-related enterprises are of particular importance in the North, North West and West regions.

**Table 6.2 ED: Number of Firms in Fishing-related Industries – Coastal EDs**

FLAG Area	Fishing #	Aqua- culture #	Process- ing #	Whole- sale #	Fishing per m capita	Aqua- culture per m capita	Process- ing per m capita	Whole- sale per m capita
North East	5	0	6	3	29	0	35	18
South East	3	4	8	9	20	26	52	59
South West	35	9	16	12	194	50	89	67
West	5	20	7	5	57	226	79	57
North West	2	13	12	0	28	181	167	0
North	21	10	26	4	230	109	284	44
<b>Coastal EDs</b>	<b>71</b>	<b>56</b>	<b>75</b>	<b>33</b>	<b>94</b>	<b>74</b>	<b>99</b>	<b>44</b>
<b>Ireland</b>	<b>128</b>	<b>92</b>	<b>88</b>	<b>63</b>	<b>28</b>	<b>20</b>	<b>19</b>	<b>14</b>

When regions are defined in terms of shoreline EDs, nearly two-thirds (235 out of 371 or 63.3%) of fishing-related industries are located within the coastal regions. Defined at this level, there are about three fishing-related enterprises per 10,000 people; i.e. three times as many compared to the coastal counties. Again the North has the highest concentration, with almost seven businesses per 10,000 people, whilst the South West, West and North West all have about 4 enterprises for the same number of residents. The relative importance of industries within the different regions reflects those already identified for coastal counties. Fishing is of particular relevance in the shoreline EDs of the North and South West, whilst aquaculture makes the greatest contribution in the West and North West. Fish processing has a particular relevance in the North and North West, again considering the number of enterprises per 10,000 residents, as this is more insightful in terms of contribution to the local economy.

**Table 6.2 RO: Number of Firms in Fishing-related Industries – Dunmore East**

Dunmore East	Fishing #	Aqua- culture #	Process- ing #	Whole- sale #	Fishing per m capita	Aqua- culture per m capita	Process- ing per m capita	Whole- sale per m capita
Killea	1	0	1	0	742	0	742	0
Rathmoylan	0	0	0	0	0	0	0	0
Woodstown	0	0	0	0	0	0	0	0
<b>Dunmore East A</b>	<b>1</b>	<b>0</b>	<b>1</b>	<b>0</b>	<b>329</b>	<b>0</b>	<b>329</b>	<b>0</b>
Faithlegg (Pt.)	0	0	0	0	0	0	0	0
Ballyhack	0	0	1	1	0	0	768	768
Templetown	0	0	0	0	0	0	0	0
<b>Dunmore East B</b>	<b>0</b>	<b>0</b>	<b>1</b>	<b>1</b>	<b>0</b>	<b>0</b>	<b>251</b>	<b>251</b>
<b>Dunmore East</b>	<b>1</b>	<b>0</b>	<b>2</b>	<b>1</b>	<b>142</b>	<b>0</b>	<b>284</b>	<b>142</b>

The final table shows the number of fishing-related enterprises in the narrowly-defined area of Dunmore East (A) and the wider Dunmore East Harbour Area. The narrowly-defined Dunmore East (A) area hosts one fishing businesses and one fish-processing firm, which are both located in Killea ED. The wider Dunmore East Harbour Area, hosts another fish-processing company and one wholesale business, both situated in Ballyhack ED. Unfortunately, the data do not include employment, which makes it impossible to make inferences regarding the relative importance of these enterprises to local employment.

## 7 Appendix: Key Features of the Pobal HP Deprivation Index

This appendix provides a brief summary of the Pobal Haase-Pratschke Deprivation Index (HP Deprivation Index hereafter), drawing on recent data from the 2011 Census of Population. Building on the innovative and powerful approach to the construction of deprivation indices developed in our previous research (Haase and Pratschke, 2004, 2005, 2008, 2010, 2011), the ED-level 2011 Pobal HP Deprivation Index provides an up-to-date analysis of the changes in deprivation that have occurred during the fifteen years of economic growth between 1991 and 2006, as well as the changes subsequent to the onset of the recession after the 2006 Census.

The HP Deprivation Index presented in this report is based on an analysis at the level of Electoral Divisions (ED) and **not** Small Areas (SA), the new census geography developed jointly by the Ordnance Survey of Ireland (OSI) and the Central Statistics Office (CSO) for the publication of the Small Area Population Statistics (SAPS) from the 2011 Census of Population. The decision to utilise the ED-level analysis rather than one based on SAs is informed by the consideration that coastal EDs are relatively small in (population) size, and thus SA-level analysis does not provide significant advantages compared to the ED-level analysis. However, by basing our analysis on EDs, we are able to provide consistent data for the past five censuses, spanning the 1991 to 2011 period, whilst an SA-level analysis could only be done for the 2006 and 2011 censuses.

**Please note that the 2011 HP Deprivation Index replaces all previously published data, as all data are computed in a consistent manner for the 1991 to 2011 census waves. Also note that index scores that are constructed from the SA level analysis – and displayed on Pobal Maps and the AIRO websites - cannot be compared with those derived from an ED level analysis as presented in this report.**

### 7.1 How is the 2011 Pobal HP Deprivation Index constructed?

Most deprivation indices are based on a factor analytical approach which reduces a larger number of indicator variables to a smaller number of underlying dimensions or factors. This approach is taken a step further in the Pobal HP Deprivation Index developed by Haase and Pratschke: rather than allowing the definition of the underlying dimensions of deprivation to be determined by data-driven techniques, the authors develop a *prior conceptualisation* of these dimensions. Based on earlier deprivation indices for Ireland, as well as analyses from other countries, three dimensions of affluence/disadvantage are identified: **Demographic Profile, Social Class Composition and Labour Market Situation.**

**Demographic Profile** is first and foremost a measure of rural affluence/deprivation. Whilst long-term adverse labour market conditions tend to manifest themselves in urban areas in the form of unemployment blackspots, in rural areas, by contrast, the result is typically agricultural underemployment and/or emigration. Emigration from deprived rural areas is also, and increasingly, the result of a mismatch between education and skill levels, on the one hand, and available job opportunities, on the other. Emigration is socially selective, being concentrated amongst core working-age cohorts and those with further education, leaving the communities concerned with a disproportionate concentration of economically-dependent individuals as well as those with lower levels of education. Sustained emigration leads to an erosion of the local labour force, a decreased attractiveness for commercial and industrial investment and, ultimately, a decline in the availability of services.

*Demographic Profile is measured by six indicators:*

- the percentage change in population over the previous five years
- the percentage of population aged under 15 or over 64 years of age
- the percentage of population with a primary school education only
- the percentage of population with a third-level education
- the percentage of households with children aged under 15 years and headed by a single parent
- the mean number of persons per room

**Social Class Composition** is of equal relevance to both urban and rural areas. Social class background has a considerable impact in many areas of life, including educational achievements, health, housing, crime and economic status. Furthermore, social class is relatively stable over time and constitutes a key factor in the inter-generational transmission of economic, cultural and social assets. Areas with a weak social class profile tend to have higher unemployment rates, are more vulnerable to the effects of economic restructuring and recession and are more likely to experience low pay, poor working conditions as well as poor housing and social environments.

*Social Class Composition is measured by five indicators:*

- the percentage of population with a primary school education only
- the percentage of population with a third-level education
- the percentage of households headed by professionals or managerial and technical employees, including farmers with 100 acres or more
- the percentage of households headed by semi-skilled or unskilled manual workers, including farmers with less than 30 acres
- the mean number of persons per room

**Labour Market Situation** is predominantly, but not exclusively, an urban measure. Unemployment and long-term unemployment remain the principal causes of disadvantage at national level and are responsible for the most concentrated forms of multiple disadvantage found in urban areas. In addition to the economic hardship that results from the lack of paid employment, young people living in areas with particularly high unemployment rates frequently lack positive role models. A further expression of social and economic hardship in urban unemployment blackspots is the large proportion of young families headed by a single parent.

*Labour Market Situation is measured by three indicators:*

- the male unemployment rate
- the female unemployment rate
- the percentage of households with children aged under 15 years and headed by a single parent

Each dimension is calculated in the same way for each census wave and then combined to form an Absolute Index Score and Relative Index Score. The **Absolute Index Scores** have a mean of zero and a standard deviation of ten in 1991, with varying means and standard deviations in the successive census waves that reflect the underlying trends.

The **Relative Index Scores** are fully standardised, with a mean of 0 and standard deviation of 10 for each wave, in order to remove temporal trends and highlight differences in relative deprivation between areas at a single point in time.

## 7.2 Interpretation of the 2011 Pobal HP Deprivation Index

### What is the difference between the Absolute and Relative Index Scores?

The **Absolute Index Scores** measure the actual affluence/deprivation of each area on a *single fixed scale* which, for 1991, has a mean of zero and standard deviation of ten. As the economy improved over the 1991 to 2006 census periods, the Absolute Index Scores gradually increased, akin of a rising tide that lifts all boats. However, following the onset of the prolonged and severe recession in 2007, the Absolute Index Scores for most EDs have again decreased significantly over the past census

period. Because affluence/deprivation is measured on a fixed scale, it is possible to use the Absolute Index Scores to quantify these changes across successive waves of data.

If we are interested in targeting resources towards disadvantaged areas, the main emphasis is on the relative position of each area at a specific point in time. This is represented by the **Relative Index Scores**, which have been rescaled so as to have a mean of zero and standard deviation of ten *at each census wave*. Thus, for any current analysis, the appropriate deprivation measure to use is the **2011 Relative Index Score**. It shows the position of any given ED *relative to all other EDs in 2011*. Table 7.1 shows the means and standard deviations for the absolute and relative deprivation scores across the five census waves 1991 to 2011.

**Table 7.1: Distribution of Pobal HP Deprivation Scores, 1991 to 2011**

HP Deprivation Index	N	Minimum	Maximum	Mean	Std. Deviation
HP 1991 ED absolute	3,409	-28.0	73.3	0.0	10.0
HP 1996 ED absolute	3,409	-27.4	45.7	4.3	9.2
HP 2002 ED absolute	3,409	-30.6	42.1	8.4	9.9
HP 2006 ED absolute	3,409	-35.0	39.9	9.2	9.3
HP 2011 ED absolute	3,409	-43.7	41.6	-1.4	10.1
HP 1991 ED relative	3,409	-28.0	73.3	0.0	10.0
HP 1996 ED relative	3,409	-34.4	45.1	0.0	10.0
HP 2002 ED relative	3,409	-39.4	34.0	0.0	10.0
HP 2006 ED relative	3,409	-47.4	32.9	0.0	10.0
HP 2011 ED relative	3,409	-41.9	42.7	0.0	10.0

#### How should the HP Index Scores be interpreted?

The first part of Table 7.1 shows the distribution of **Absolute Index Scores** for the 1991 to 2011 census waves and reveals a number of important attributes of the Index. Firstly, for each census wave, most of the scores are in a total range of about 80 Index Scores. The measurement scale is identical for all five census waves, thus allowing the direct comparison of each area's score from one wave to the other. The scale is constructed in such a way that the mean score for 1991 is equal to zero and the standard deviation is equal to ten. The means describe how average affluence first improved between 1991 and 2006, and subsequently reverted to below its 1991 starting point.

The **Relative Index Scores** are rescaled to have a mean of zero and a standard deviation of ten at each census wave. The labels used for each range of standard deviations are shown in table 7.2.

**Table 7.2: Distribution and Labels of Relative Index Scores, 2011**

Relative Index Score	Standard Deviation	Label	Colour Scheme in Maps	Number of EDs in 2011	Percentage of EDs in 2011
over 30	> 3	extremely affluent	dark blue	19	0.6
20 to 30	2 to 3	very affluent	medium blue	91	2.7
10 to 20	1 to 2	affluent	medium green	368	10.8
0 to 10	0 to 1	marginally above average	light green	1,161	34.1
0 to -10	0 to -1	marginally below average	light yellow	1,332	39.1
-10 to -20	-1 to -2	disadvantaged	medium yellow	352	10.3
-20 to -30	-2 to -3	very disadvantaged	orange	76	2.2
below -30	< -3	extremely disadvantaged	red	10	0.3
Total				3,409	100.0

### **How are deprivation scores calculated for larger areas?**

Both Absolute and Relative Index Scores can easily be derived for any aggregate area, such as counties or local authority areas, regions or Ireland as a whole. In this report, we have used aggregates for the Harbour Centre areas, the coastal EDs and the coastal counties. This is done by calculating the population-weighted average for the aggregate area. Thus, the affluence or deprivation of any ED will contribute to the area score proportionate to the number of people residing within it.

The full SA-level data for all of the underlying indicator variables and the Absolute and Relative Index Scores can be accessed on the interactive mapping site <http://maps.pobal.ie/#/Map>. All supporting material concerning the Pobal HP Deprivation Index may be downloaded from [www.trutzhaase.eu](http://www.trutzhaase.eu).
